Re: RFB Number: RFB #1905011E, Amendment No. 1
Commodity: Drone Program Equipment

Please note: This amendment is issued to provide a list of questions that have been received by NMIMT.

1. Q) On the passive RF detection, is the expectation for the system to detect Non-DJI drones?
   A) Please bid for the DJI only detector and a system to detect all drones. Displaying capabilities of RF detection.

2. Q) Where does the data needs to be hosted?
   A) We would like to look at options available. From portable hard drives, using on-site servers to cloud-based storage solutions.

3. Q) Does the data from the Radar system and RF sensor should be displayed in one software platform?
   A) One platform is not mandatory.

4. Q) The Radar specification states a 2 km range but not an area. Radar units are sold in sector units each covering 90 -120 degrees? Is the intended coverage a 360 or 90 directional?
   A) For our purposes a 90 degree directional will work. This is to demonstrate radar capability.

5. Q) Qty is left blank on both the RF and Radar?
   A) 1 to 3 units will be needed. Depends on pricing received.

6. Q) Are vendors able to bid some products not all? For example, we are interested in bidding on Drone Detection hardware but our company does not sell drones or command trailers.
   A) Items may be bid individually. In fact, we encourage bidding on individual items as it may be more cost effective for both parties.

All other terms and conditions of the RFB remain unchanged.

All Offerors are required to confirm the receipt of this amendment in their bid response. The proposal due date remains as June 6, 2019 at 2:00 p.m. MST.
