## DEDICATION

This, the 1966 PORPHYRY, is dedicated to the student body. This is a record of your accomplishments. As a complete record of everything you have done, it lacks; all of what you have done during the past year could not be printed—only the spirit was even sought. This is a record of a part of the transformation Tech is going through—a record of you, the transformers. This yearbook is yours—what you did and how you did it.

## EDITORIAL STAFF

# FALL SPORTS

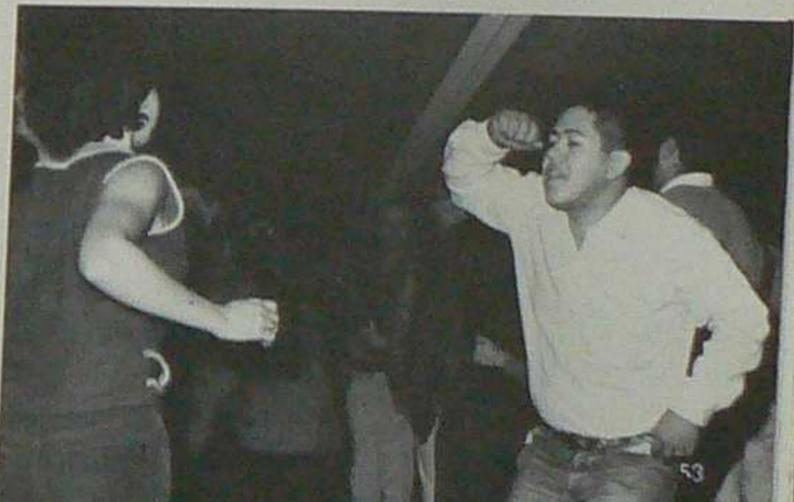

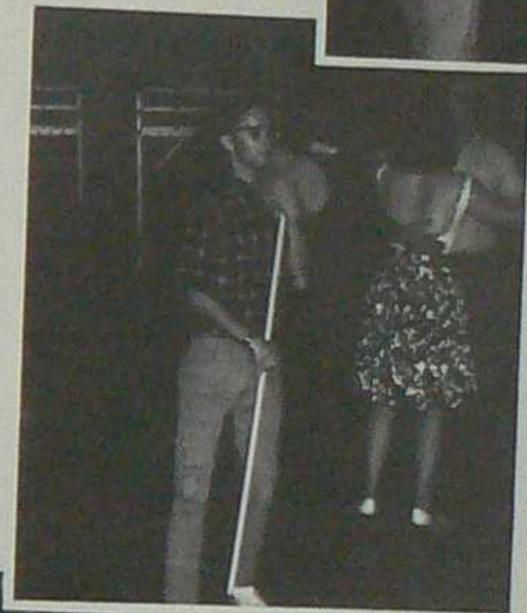

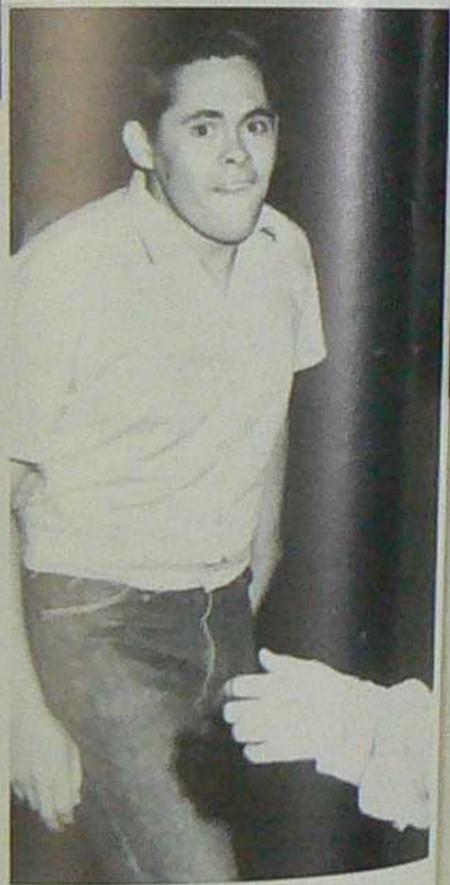

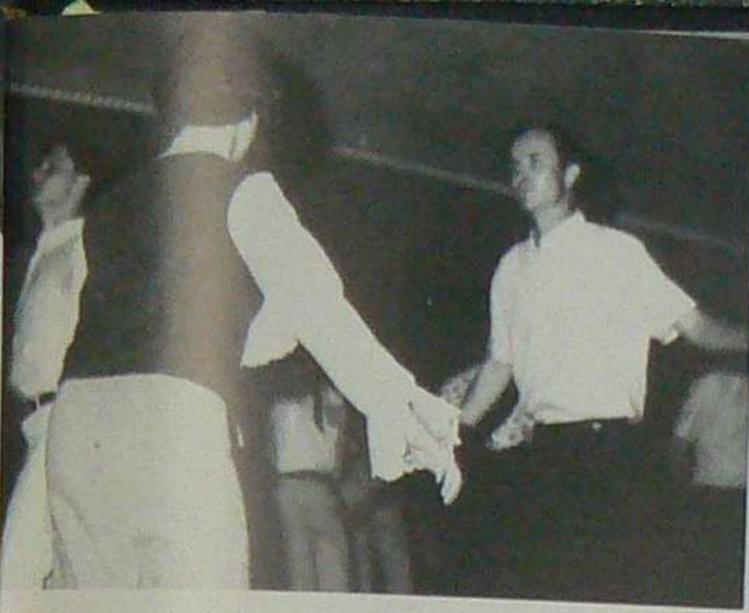

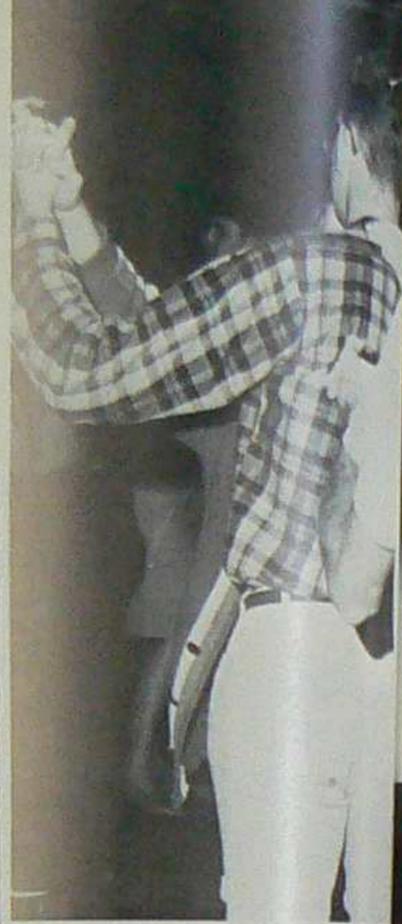

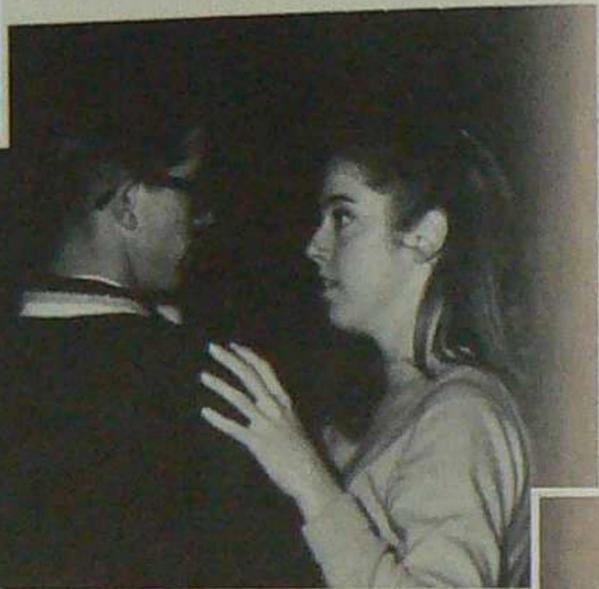

The large number of teams in this fall's intramural football season competition made a longer season necessary. A few teams ran out of steam—others ran out of players by season's end.

Dr. Balk, world-famous paleontologist, and terror of sophomore geology majors.

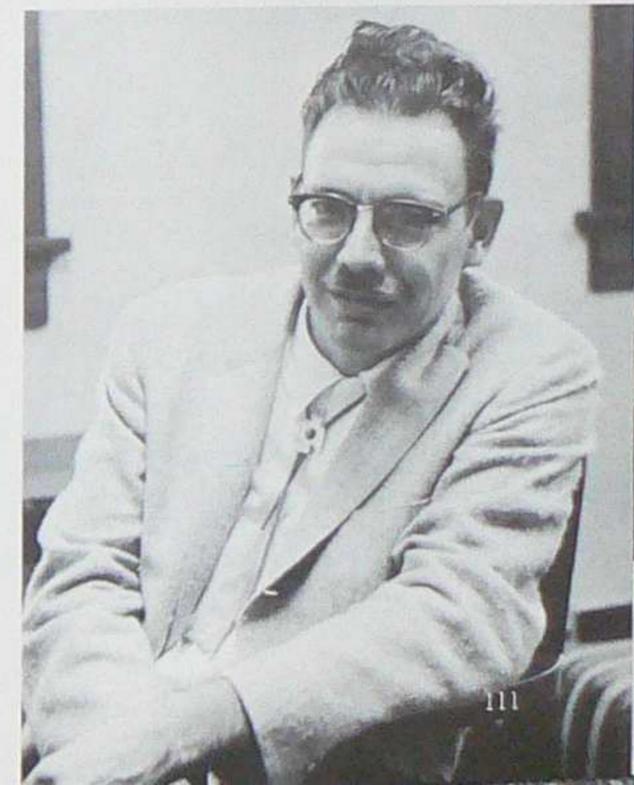

Dr. Clay T. Smith, demonstrating proper techniques in Rock Examination.

# FACULTY

Mr. Schaedler, caught pondering. The next Drama Tech show . . . or the fate of another frosh theme?

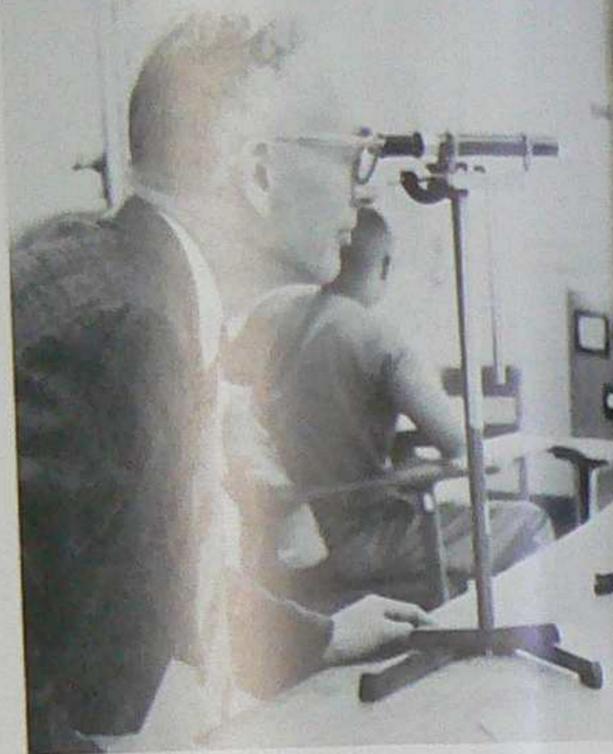

Dr. Jack McKee, our man about and IN the world of letters.

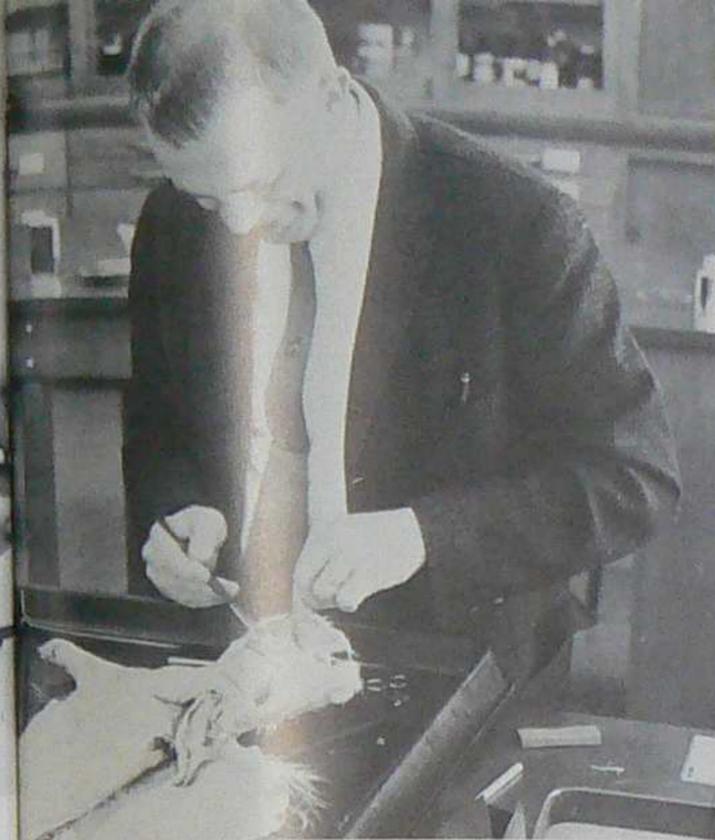

Dr. Wilkening, Head of the Department of Physics and Geophysics and the Graduate School.

Dr. Fallon demonstrating equipment used in the Sophomore Physics Lab.

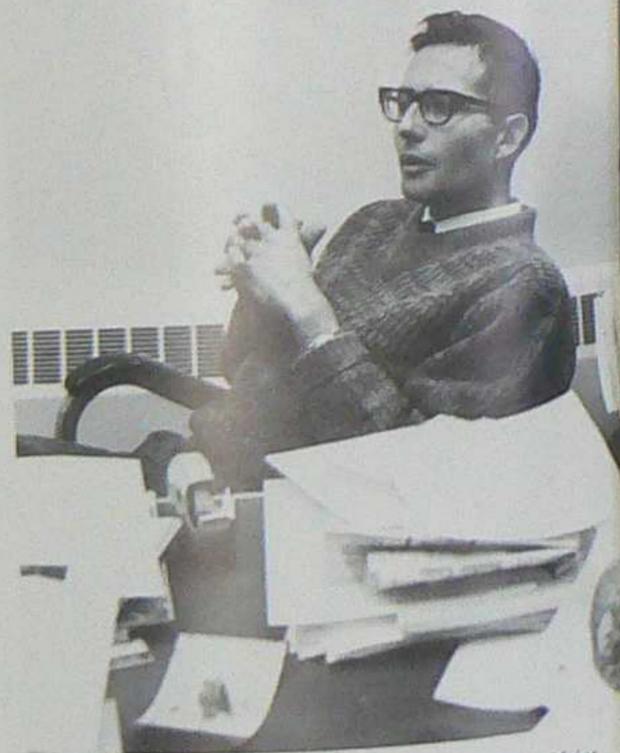

Dr. Porter demonstrating proper lab technique on a cat. Dr. Porter is the one with the tie.

Mrs. Merry M. Lomanitz

## THE FACULTY AT NEW MEXICO TECH

This section was first intended as a pictorial essay—the pictures were taken but the essay foundered for one simple reason. There is nothing to say about our faculty that has not already been said, either under the breath in a class, over a table in the canteen, or in a public relations brochure. We have a faculty that is exceptional in its brilliance, astounding in its idiosyncrasies and (this is under the breath), at times, fantastically far out of its tree.

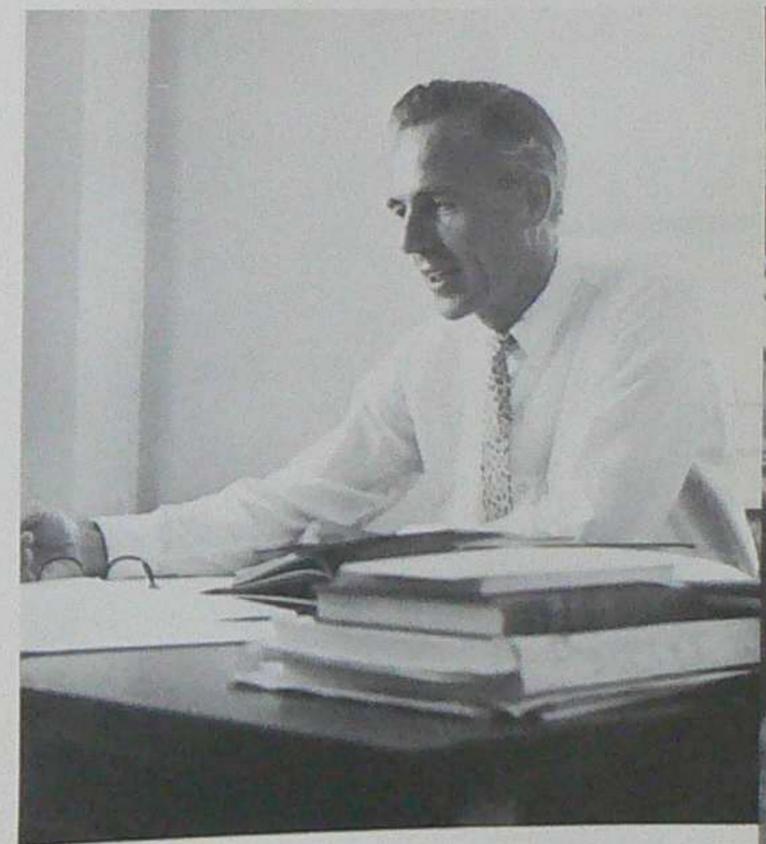

Dr. Johnson discussing the new Biology Major.

With an introduction as full of superlatives as a movie marquee, we decided it would be appropriate to merely narrate a travelogue of a journey through the WILD, WONDERFUL WORLD OF TECH'S FACULTY. So prepare yourself, Gentle Reader, for:

Astounding!  
Amazing!

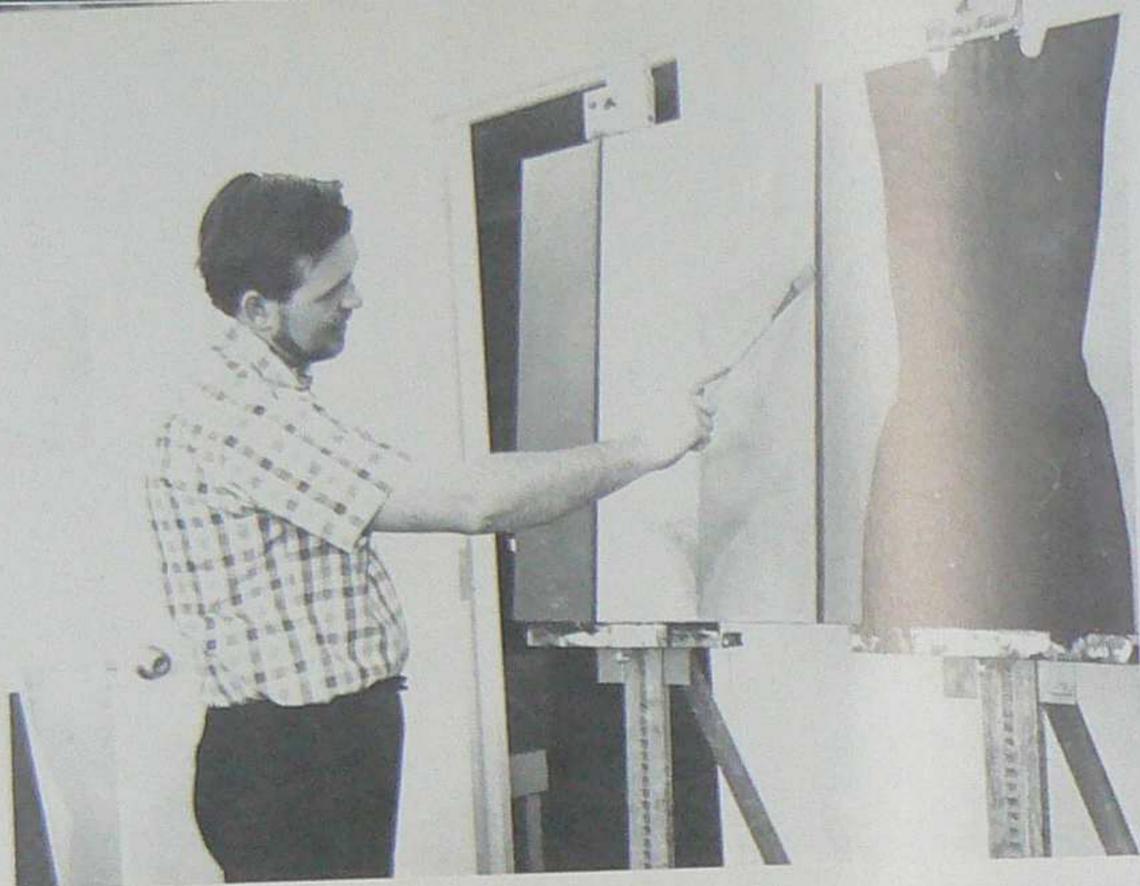

TECH'S TETCHED! \*  
CAST OF THOUSANDS!

Dr. Purcell in a moment of quiet conversation.

\* With genius, of course. †

\* Ed. Note: this is hedging.

Jim O'Connor doing a bit of brushwork.

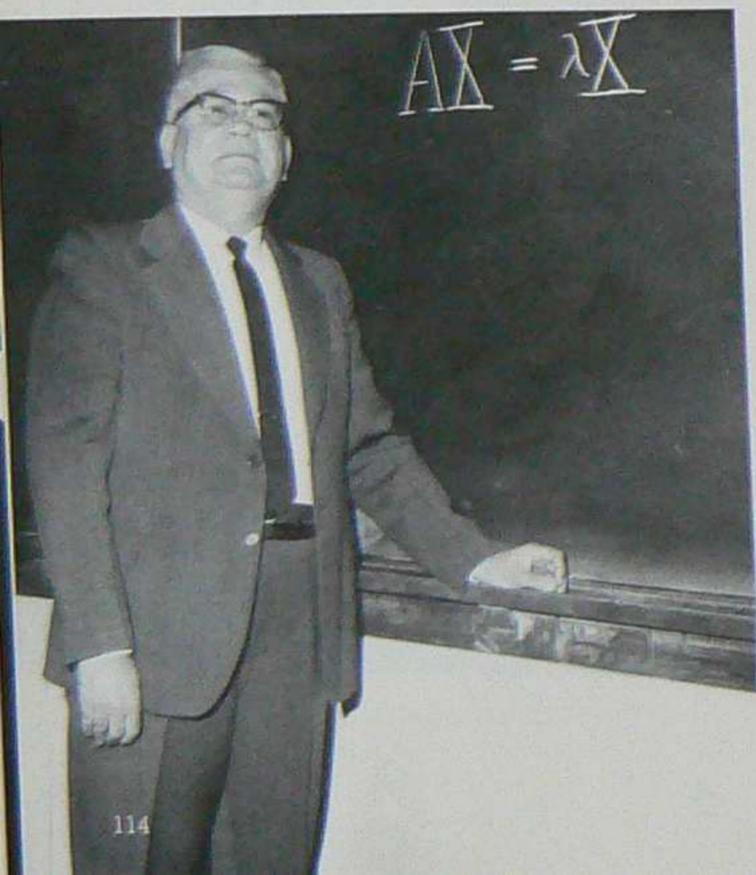

Dr. David Mitchell, Head of the Engineering Department.

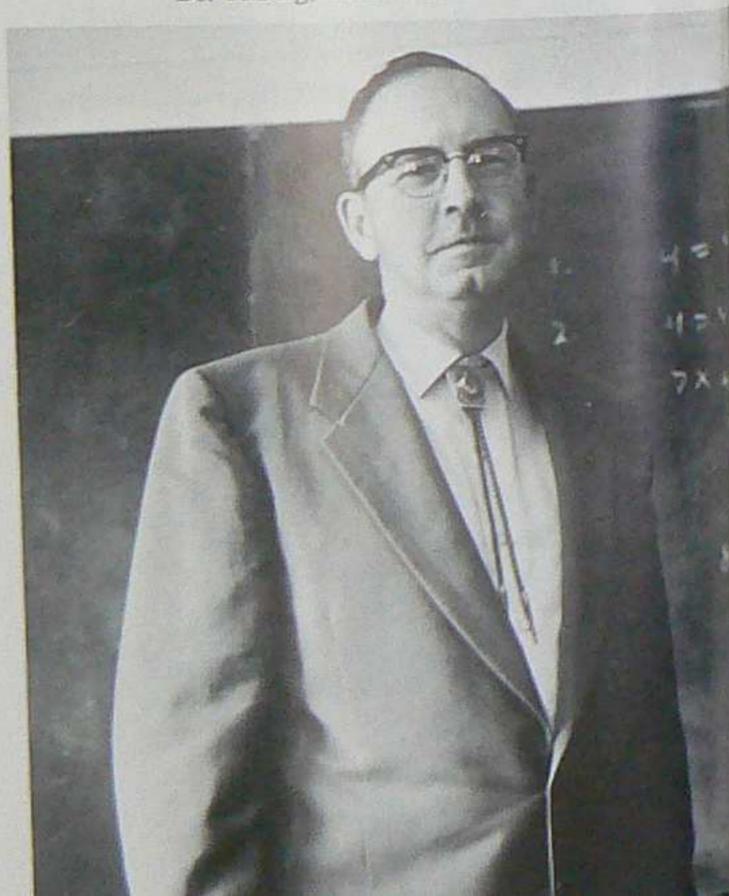

Dr. McGehee, active member of the computer cult.

The Old Master, Dr. Sanchez-Diaz.

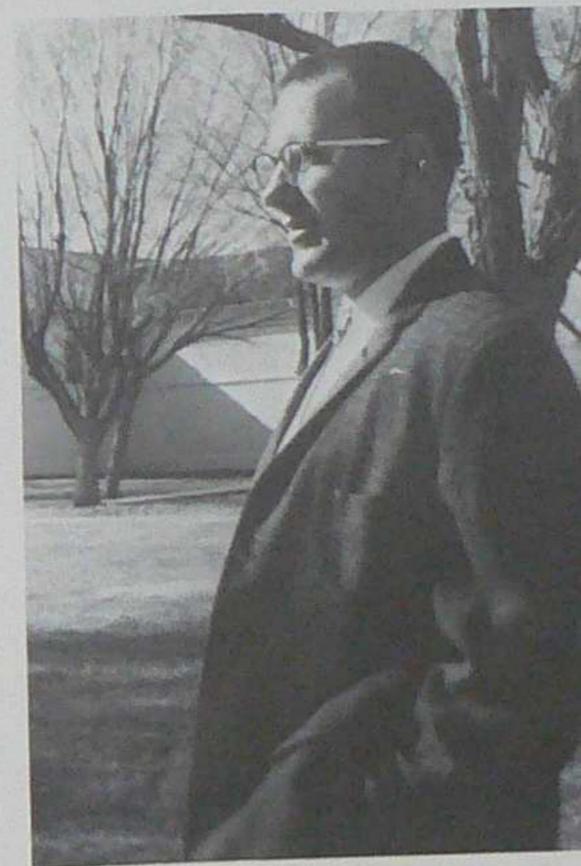

Dr. Friberg, Teacher of Mathematics.

Narrator:

We first passed through the land of Brown Hall, marked by rocky soil and hard-hearted natives, who practice a variety of religions, some demanding inhuman sacrifices and worshipping stone idols, while others practice an esoteric and pedantic iconoclasm. It was in this land that one of our party was killed by a pointed hammer, hurled from a dark room at the top of the stairs, and another was found screaming epithets, tearing his hair and muttering about idiots with screwdrivers. In connection with this we discovered a tall, belligerent native that used this same phrase as his battle cry.

Dr. Brower, coolly examining the situation

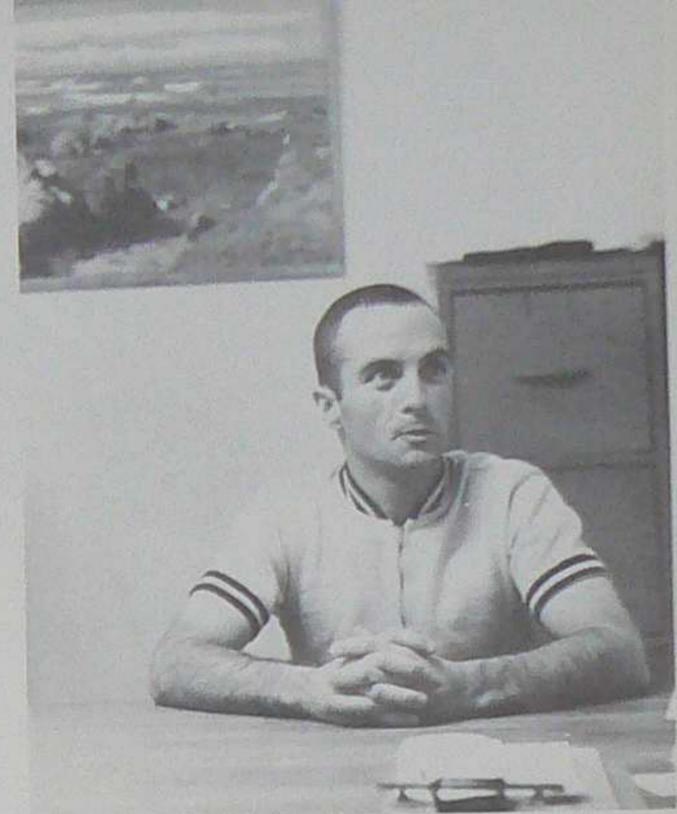

Dr. Keizer at a busy moment.

Dr. Brandvold helping a student.

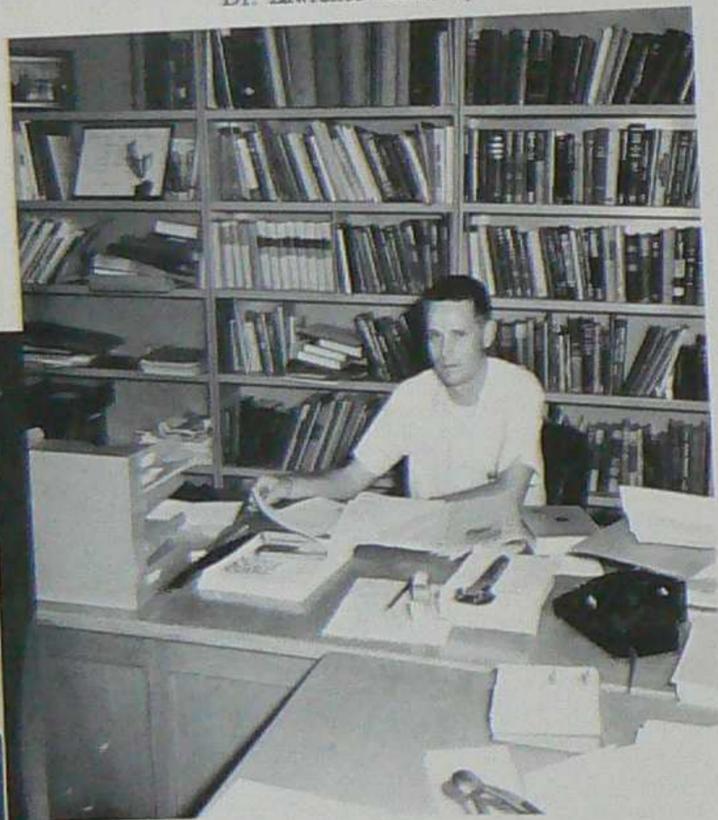

Mr. Speare . . . Librarian, Senior Faculty Member, Alumnus.

Mr. Blair in his lair.

Dr. Lawrence Hathaway

We then entered the Land of the Weird, where we encountered a group of ghoulish creatures who practice indescribable rites on the bodies of dead animals, slowly destroying the carcasses while muttering incomprehensible gibberish. The rest of the inhabitants are of no importance, with the exception of one particularly frightening personage who was obscured in a cloud of chalk dust and continuously shouted phrases filled with rolling "r"'s. (Of interest to the avid student of such things, many of the inhabitants of this land periodically take part in fertility rites, using a cow's head!)

We then entered a land that seemed to have sprung out of Dante's inferno. The place was filled with a sulfurous smoke and was unbearably unpleasant, even for a short visit. All the members of our party agreed that even with only a fleeting glimpse of this land, nothing could force us to return. We then . . .

EDITOR INTERRUPTS: . . . Speaking of returning, I hope to next year, so I'm going to stop this before you reach that land of high towers in the distance.

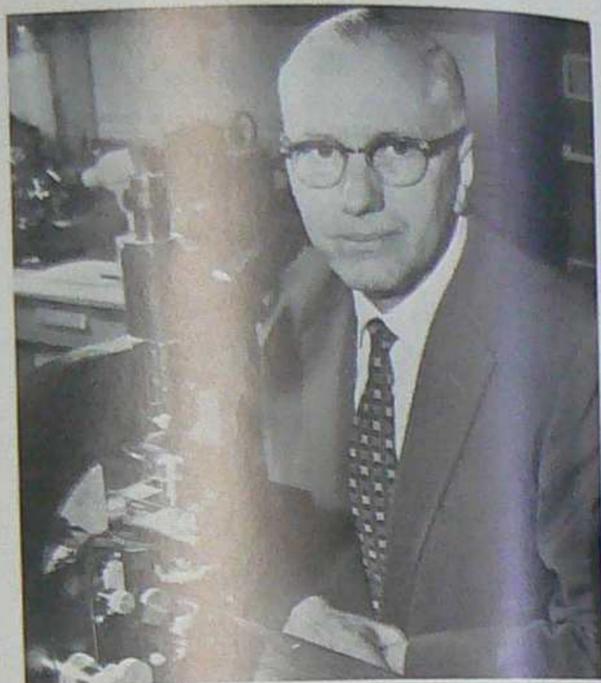

ANNOUNCER: Due to technical difficulties the rest of this travelogue will be without audio. Thank you.

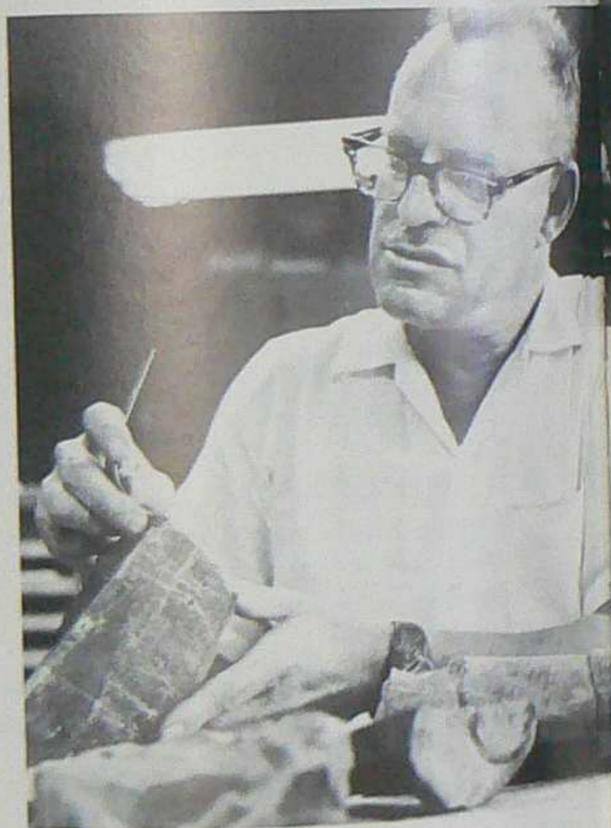

McGettigan counseling a skin-diving coed.

Dr. Hantush, one of the lecturing researchers.

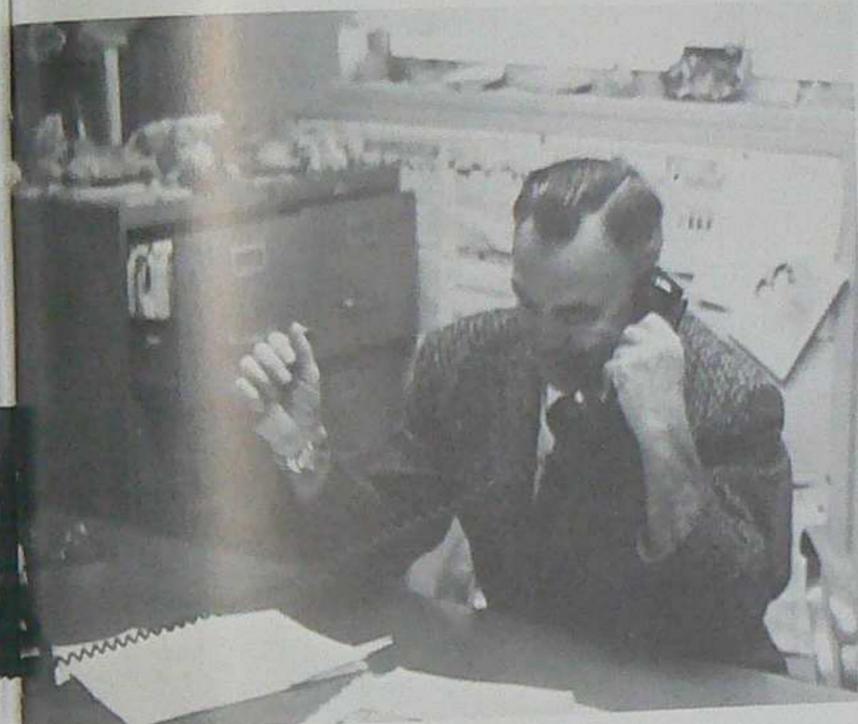

Dr. Crozier, senior physicist and our man about the world of micrometeorites.

Dr. Flower, also a world-famous paleontologist, examining a fossil form in his lab.

Dr. Bartendu, research fellow from India.

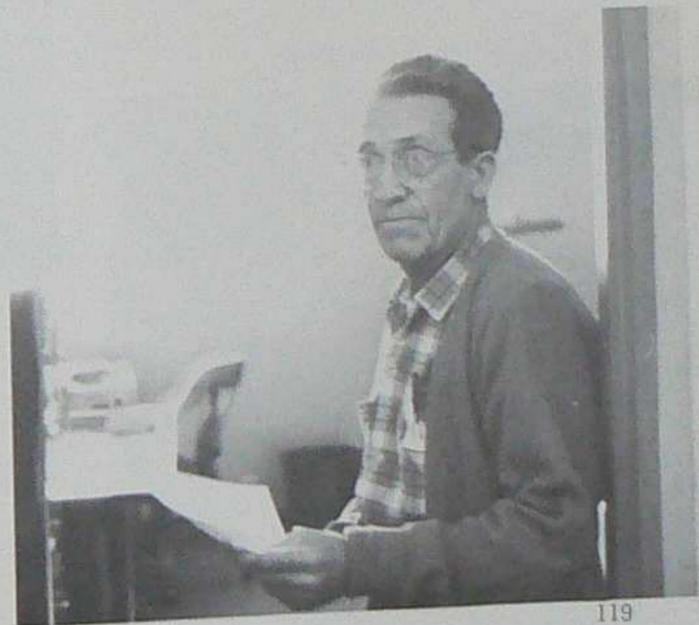

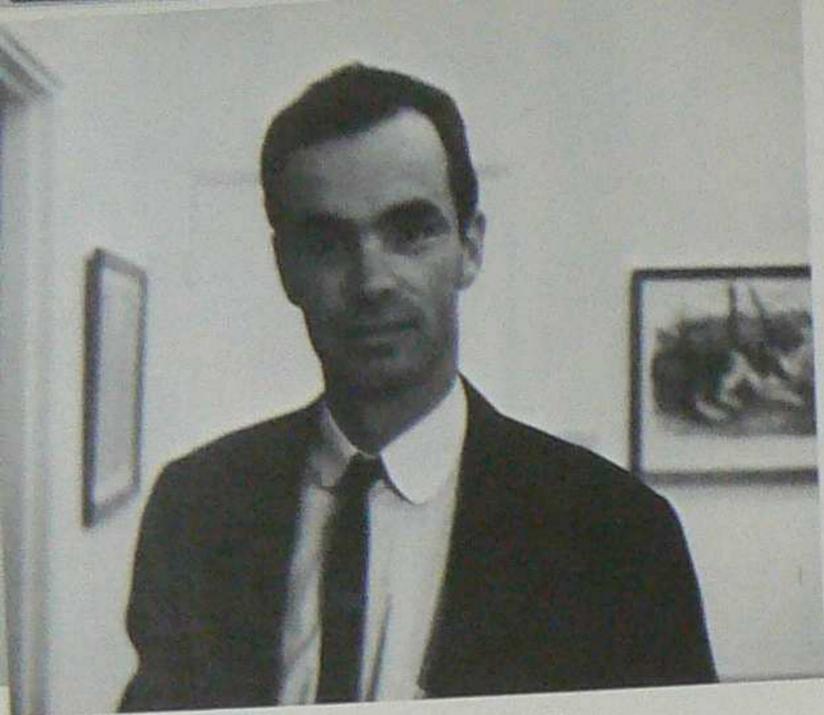

"Lefty" Thompson, Director of the State Bureau of Mines and Mineral Resources.

Dr. Chapin, newest addition to Tech's Geology Department.

Dr. Dexter Reynolds, mild-mannered chemist-in-charge of the Met Lab.

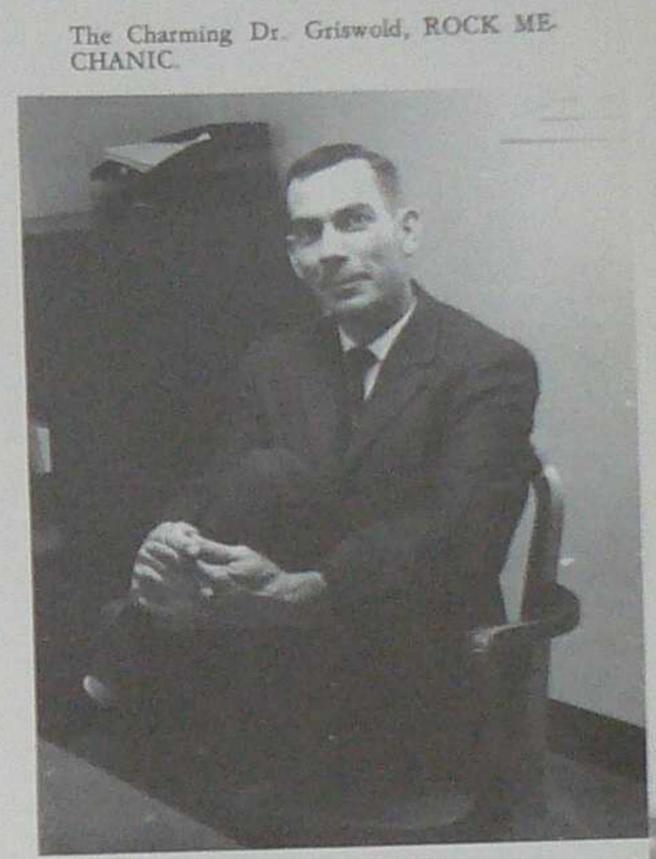

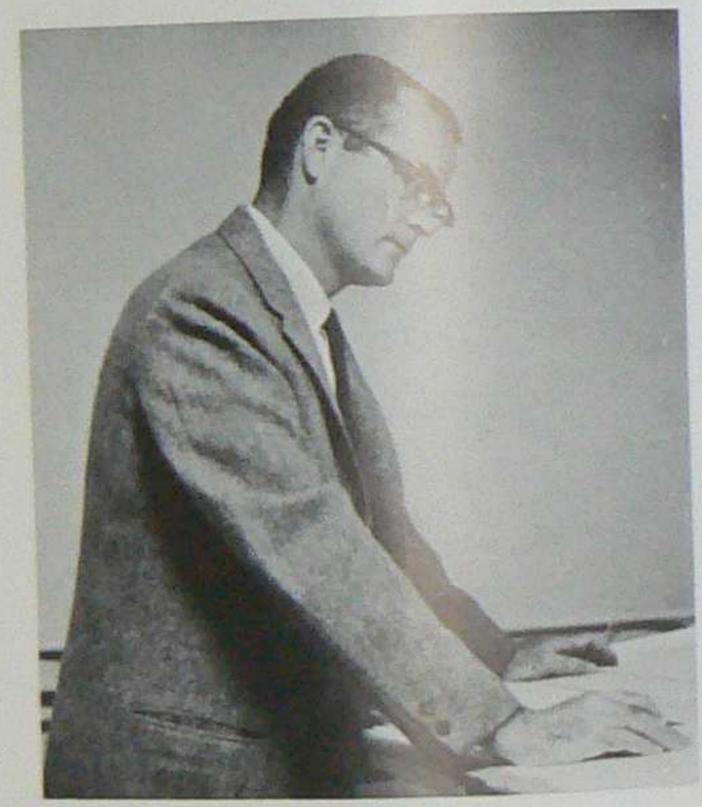

Dr. Colgate, OUR LEADER.

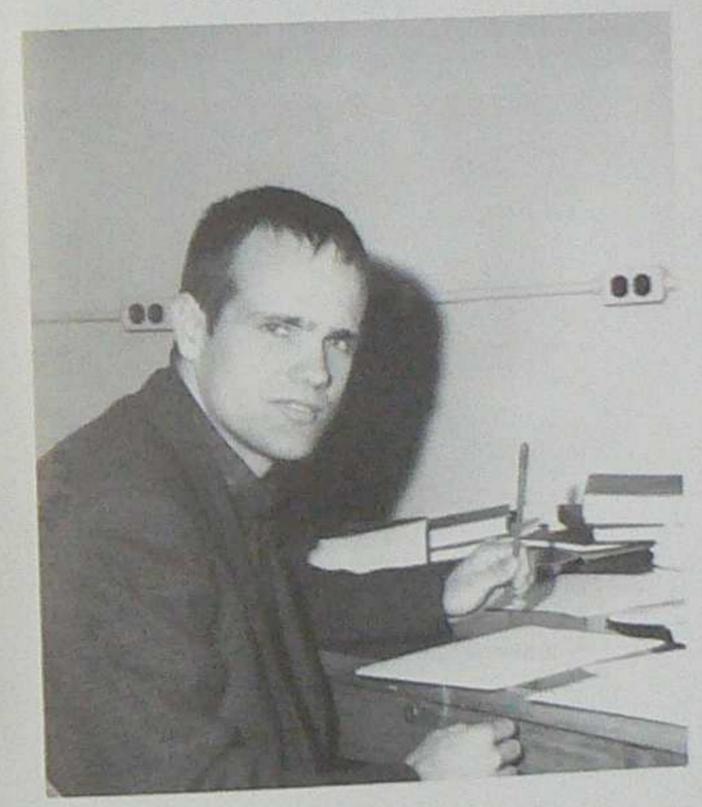

Dr. Marx Brook, pragmatically explaining the obviously trivial solution to a Mechanics problem.

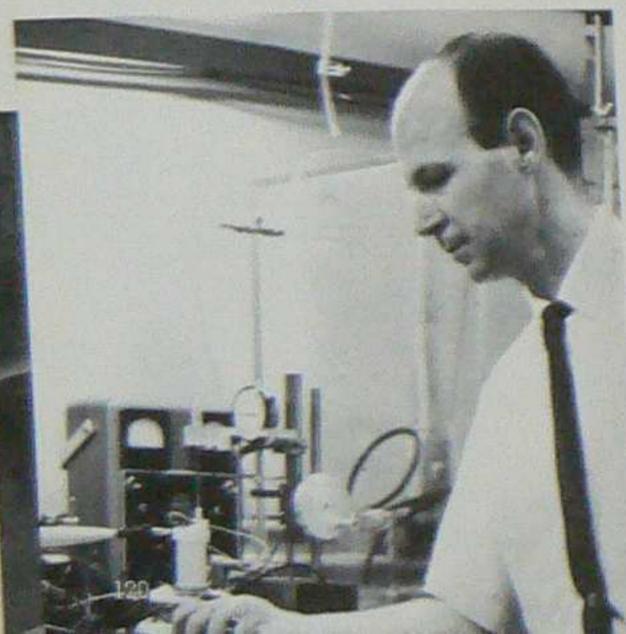

The Charming Dr. Griswold, ROCK MECHANIC.

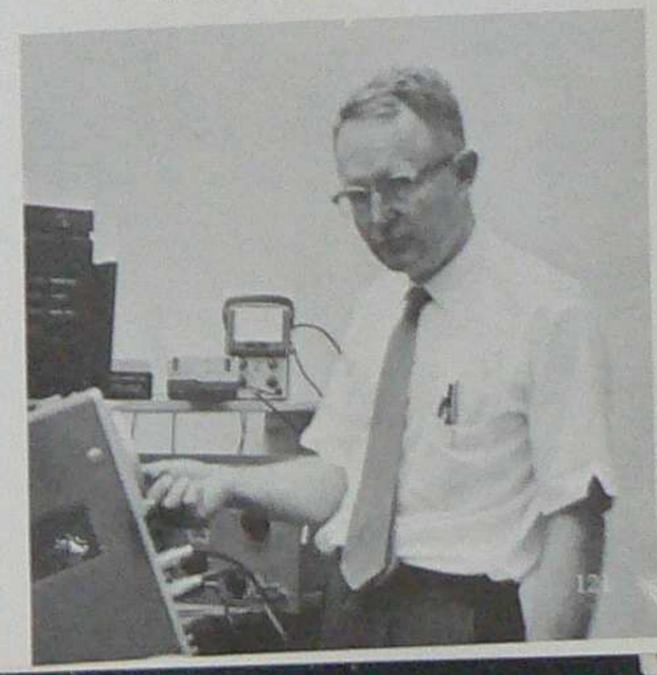

Dr. Sanford, microseismologist.

Dr. LeFebre, scientific skeptic.

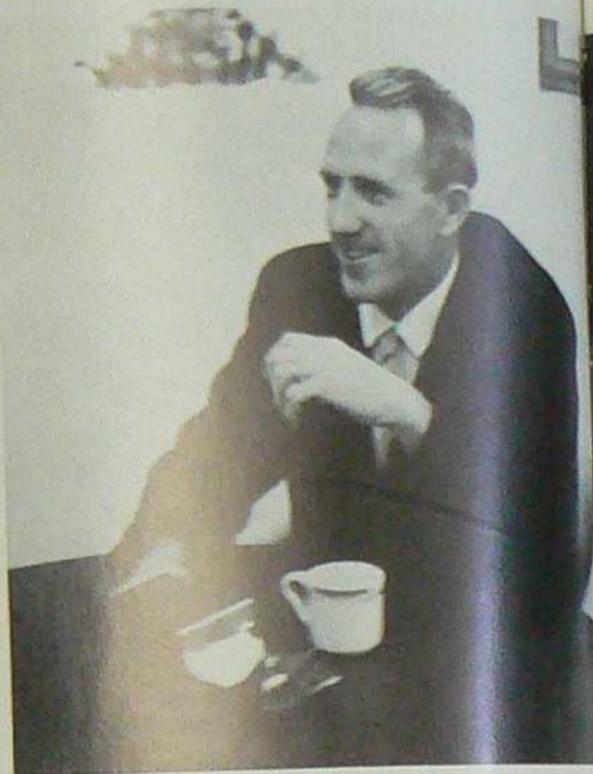

Dr. Gross, the Ice Man.

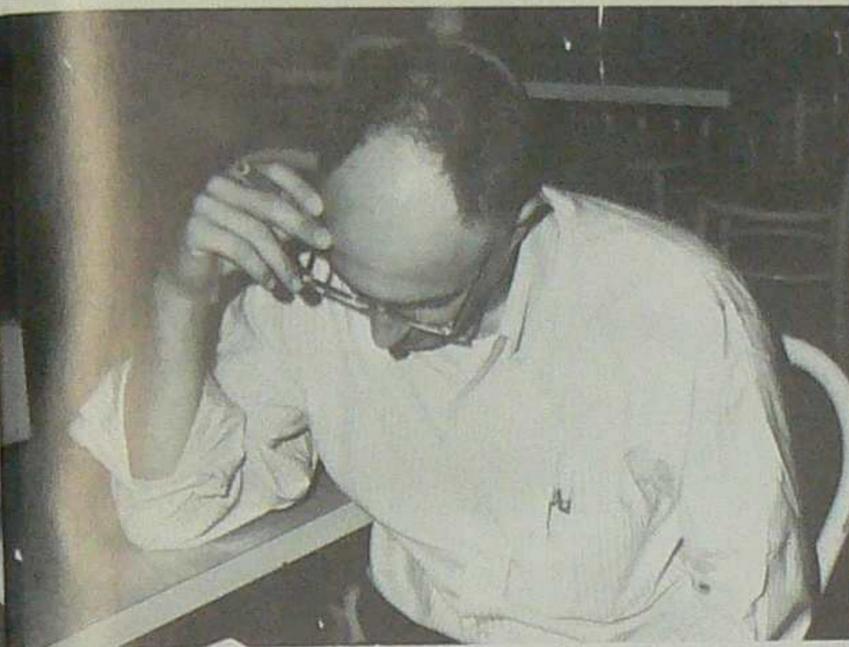

Dr. Holmes in his technical maze.

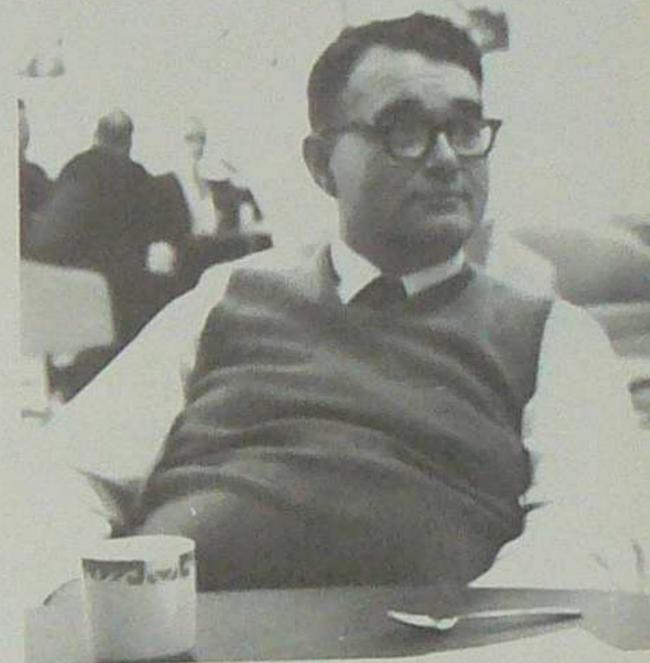

Dr. Sylvester, (not spelled with an umlaut over the y.)

Dr. Christianson, a thorn in the side of science.

Mr. Shea, . . . FRIEND OF PUBLICATIONS!— snicker.

Dr. Taylor

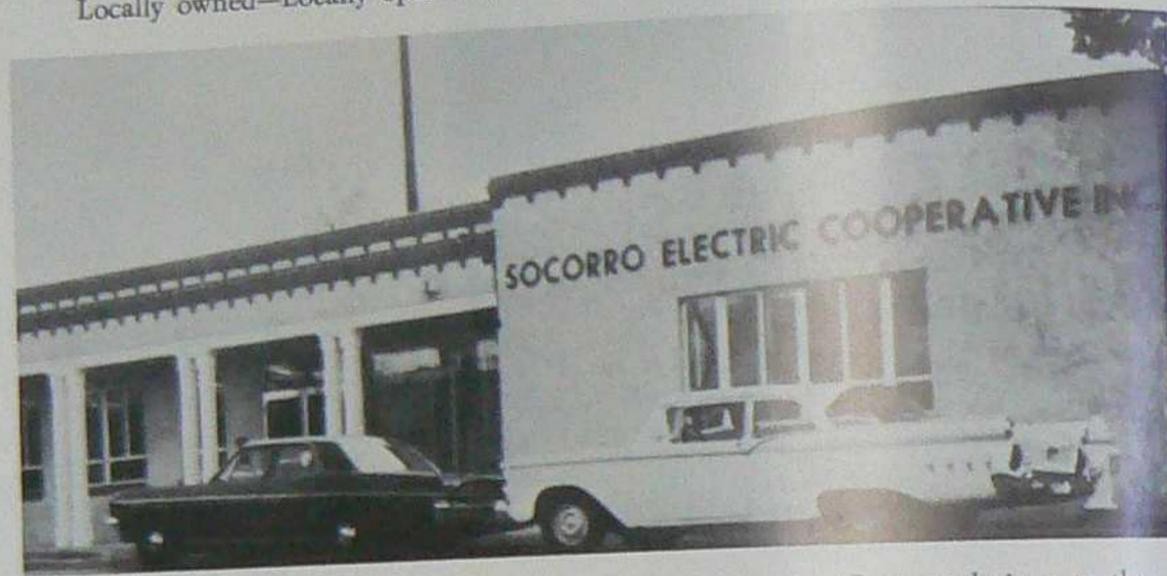

Dr. Hume, Faculty Advisor for Co-ops.

Dr. Bhappu

# NEW WORLD AHEAD

To the graduate who has just completed another phase of his education, there is a deep sense of pride and accomplishment. The door to the new world of the future has been opened a little wider... he has taken another step forward toward creating a rewarding lifetime career.

Preparing for the future is part of the pattern of our national life. In industry it is typified by the constant planning at Kennecott's Chino Mines Division. Through the years, this New Mexico copper producing company has never relaxed its efforts to develop the improvements that are the best assurance of continued successful operations in the years to come.

Right now, Kennecott is engaged in a major expansion program. It is reinvesting millions of dollars to increase the production of copper. When the program is completed, it will strengthen Kennecott's position in the world copper market.

To the people of New Mexico, this means the prospect of continued benefits, some of which help support the state's educational system.

## Kennecott Copper Corporation

CHINO MINES DIVISION

Santa Rita, Hurley, New Mexico
