Part 75 Exam Rule Calculator

- ✧ It's a tool to calculate a mine's violation rate for nine key health and safety standards for underground coal mines.
- ✧ These nine standards were identified in **MSHA's Part 75 Exam rule** implemented in 2012 requiring examinations and record keeping by mine operators.
 - It was designed to enhance health and safety by requiring operators to identify and correct hazardous conditions and violations of standards that pose the greatest risk to miners.
- ✧ These standards address ventilation, methane, roof control, combustible materials, rock dust, guarding, and other safe guards.

Part 75 Exam Rule Calculator

Mine operators, miners and MSHA can use the tool to:

- ✎ Increase the identification and correction of unsafe conditions in mines earlier
- ✎ Track progress:
 - Check each quarter for improving or declining progress
- ✎ Help plan/prepare training for mine examiners, supervisors, and annual refresher
- ✎ Can be used by mine operators to provide information to mine examiners during the quarterly review required by Part 75

Mine Data Retrieval System (MDRS)

- ☞ To use the tool, users will first need the **Mine ID number**.
- ☞ If you do not know the Mine ID, use the [Mine Data Retrieval System](#).
- ☞ Find it on the MSHA website... www.msha.gov.
- ☞ On left side about half way down the page and under Data Transparency at MSHA, click on the first bullet - **MDRS** Home Page.

The screenshot shows the 'Data Transparency at MSHA' page. Under the heading 'Mine Data Retrieval System (MDRS)', the first bullet point 'MDRS Home Page' is circled in red. Below it is a search section for 'Already know the Mine ID?' with an input field and a 'Go' button. The 'Pattern of Violations (POV)' section also has a similar search field and 'Go' button. The 'Other Data Resources' section lists 'Open Government Data Sets', 'DOL's enforcement data 2.5', and 'Data.gov'.

Information

- ✧ The Beginning Date and Ending Date are pre-populated but can be modified for a specific date range.
- ✧ The default date range for underground mines is **the most recent completed quarter** for which data is available.
- ✧ There is a lag time associated with entering the data into MSHA systems, which may be reflected in the results of this application.
- ✧ To ensure that the application generates accurate results, the Ending Date must be at least **14 days prior** to the date you are performing the search.
- ✧ The national average is calculated based on the most recent one-year period.
